

Price Guide

Effective March 01, 2006

The logo for Apollo Sunguard systems, Inc. features the word "Apollo" in a smaller, blue, sans-serif font above the word "Sunguard" in a larger, bold, blue, sans-serif font. Below "Sunguard" is the text "systems, Inc." in a smaller, blue, sans-serif font. The logo is centered within a large, stylized sunburst graphic made of yellow dots. A small yellow speech bubble icon is positioned above the "Sunguard" text.

Service Disabled Veteran Owned Small Business	

I personally received and opened the boxes to the shade structures and personally installed one. I just wanted to thank you personally for your efforts in getting them to me on time. I've attached a picture of the one that I assembled, it looks great and was very easy to do.

Thank You
Dave Snyder

As you know, sun safety has become an integral part of play area safety for our children. Skin cancer rates are rising and the solar uv exposure to children is a leading contributor. Shade is the best preventative, and can be provided by trees, buildings, or Sunguard Shade Structure Units. Regardless of the source insist that facilities your children play at provide shade.

Protect Yourself from the Sun

- **Stay in the shade whenever possible.**
The sun's rays are strongest between the hours of 10 a.m. and 4 p.m.
- **No shadow... seek the shade!**
If your shadow is shorter than you are, you're likely to burn.
- **Wear protective, tightly woven clothing, such as a long-sleeved shirt and pants.**
- **Apply a broad-spectrum sunscreen with a Sun Protection Factor (SPF) of at least 15.**
- **Reapply sunscreen every 2 hours when outdoors, even on cloudy days.**
- **Wear a wide-brimmed hat and sunglasses when outdoors.**

Best Quality Steel

Apollo Sunguard exclusively uses Allied Steel products; cold-rolled, galvanized tubular steel with a triple layer of protection. Allied products outperform most steels in tensile strength and long-term corrosion resistance. In saltwater spray and other weathering tests, Allied Steel outperforms the competition.

The Welds

Apollo Sunguard uses a special galvanized welding wire and then triple treats each weld for extra corrosion protection.

Best Quality Fabric

Apollo Sunguard Shade Cloth fabric is known for its' great strength, vibrant colors and durability. Our covers are made from *high-density polyethylene with ultraviolet additives, using mono filament and tape construction.* Sunguard covers are *rachel knitted* which ensures fabric stability and prevents the fabric from fraying, even when cut. This special knitting also ensures a consistent shade pattern.

Technical specs:
 Fabric Burst Strength: 260 KPA
 Tear Strength: 100 KG (warp)
 210 KG (weft)

The Corners

Apollo Sunguard *triple reinforces all connecting points.* Each connecting point has nylon webbing sewn in the interior to further reinforce the corner. In addition, the corners are designed to conceal the tensioning cable to give clean, smooth lines.

The Thread

Apollo Sunguard uses a Teflon (PTFE) thread from the W. L. Gore Company, which will not deteriorate in the sun. The thread carries a lifetime guarantee and will not rot due to ultraviolet exposure or other environmental causes.

The Warranty

Apollo Sunguard has the best warranty in the industry. *We warranty all steel framework for 20 years and all fabric covers for 10 years.* For further information, please see our Certificate of Warranty. *This is a non-prorated warranty.*

Fire Safety

Apollo Sunguard fabrics pass the E-84 fire rating test as well as the NFPA-701 and are rated a Class 1 Material.

Federal Recognition

Apollo Sunguard is an approved vendor to the Federal Government and has been awarded a GSA contract. We are proud to have our structures protecting military personnel all over the world!

Ultra-Violet Protection

Apollo Sunguard is the only shade company to have its cloth *tested by an independent laboratory* to verify and certify that its cloth blocks 97% or more of the cancer causing UV radiation. All colors that pass this stringent test are indicated on our brochures.

The Cable

Apollo Sunguard uses a special galvanized cable to tension the fabric perimeter. This ensures long-term durability for the cable and the fabric.

Engineering

Apollo Sunguards are designed to meet the toughest building codes in the world! *Sunguards are routinely engineered to meet 120 mph wind loads!* They are also designed from 140 to 170 mph wind-borne debris regions as specified by the American Society of Civil Engineers Standard (ASCE 07-02).

Florida House
Sarasota, FL

This application was especially successful with the two large shade structures at our Children's Learning Center playground. The colors blend in great with the existing equipment and umbrellas. The simple lines do not conflict with the architecture of the building. There is at least a ten-degree improvement in the temperature under the shade in addition to the UV ray protection.

Thanks again for your excellent service!
 David Whitt

Description	Retail
Personal Shade Device	\$59.95
Shipping	\$7

Comes with attachable accessories including: a ground shaft, table/ chair clamp, rain cover and carrying case. 52" diameter.

The PSD is designed to be a combination of a shade structure and a regular umbrella. The cover is breathable, high density polyethylene fabric similar to the canopies used on our shade structures. The cover lowers the temperature by 20°, provides up to 93% UV protection and is strong enough to withstand 40 mph winds.

sleeve imbedment

This mounting is available for the BreezeBrella™ units only.
Incorrect installation voids all warranties.

direct imbedment

Installation requires posts to be imbedded in a concrete footing in bare soil.
 Footings are specified, but are not provided.
Incorrect installation voids all warranties.

Warranty

Apollo Sunguard Systems' fabrics are warranted for 10 years against failure due to rot, UV deterioration, or faulty workmanship. Steel frames are warranted for 20 years against failure due to corrosion, deterioration or faulty workmanship. **Warranties are non-prorated.** This warranty does not include any cosmetic issues, vandalism, incidental damage or acts of God. **Structures are not designed for snow loads. Cover must be removed in winter and forecasted winds over 75 mph. Incorrect installation voids all warranties.**

Ordering

When ordering, we **must** have six (6) essential items of information:

- 1) Dimensions or Model Number
- 2) Fabric Color
- 3) Steel Finish (Powder Coat or Galvanized)
- 4) Installation (Mounting Type)
- 5) Post Height
- 6) Destination Zip Code

General Notes

Units are designed for perimeter posts only. All units are clear span—no center support posts necessary, except for BreezeBrellas and PlayBrellas. Most units require only four (4) posts, however, larger units and extra tall units may require additional perimeter posts. **Units are not designed for snow loads.**

Apollo Sunguard has over 600 standard sizes and shapes—all professionally engineered to meet national building codes and wind load requirements ASCE 07-02 (ASD, LRFD). If you don't see the size you are looking for, please call for a quote from our data bank. Prices are subject to change.

Custom Applications

Apollo Sunguard Systems, Inc. product designers and engineers can design units to meet most requirements. Send us a survey, a site plan or a proposal and we will be glad to give you a quote and preliminary design. **We can custom design for snow loads and wind loads up to 170 mph (with cover off) and 90 mph (with cover on). Please call us for a custom fabrication quote.**

Packaging & Handling

Standard packaging and handling is included in the net price listed. Additional packaging is required west of the Mississippi River, add \$60 per unit.

Sealed Drawings

If sealed drawings are required, a recent site plan or survey indicating any play structures must be included with the order. Additional charges will be incurred for sealed drawings.

Steel Frame Finishes

Apollo Sunguard proudly provides a top quality, cold-rolled, flo-coat galvanized finish as standard on all units. Customers may select one of our 11 standard powder coat colors or as an alternative galvanized finish. Custom colors are available, customer must provide a swatch for matching.

Attention Designers

All squares, rectangles and triangles can be connected to expand coverage or to meet architectural requirements. Units are connected by special interconnecting posts. Calculate price by using standard unit prices of the units being connected. Please specify on the purchase order that you want interconnecting units.

Terms & Conditions

Prices FOB—Sarasota, Florida
4%—discount when full payment is received with order.
2%—10, Net 30 from date of invoice to all government agencies and those with approved credit.
All others—50% with order, balance when shipped. Accounts exceeding 30 days of invoice will be billed finance charges at the rate of 1.5% of unpaid balance with a minimum \$25 charge.

Post Height

Additional post heights of 9'-14' are available, please call for a custom quote. Remember, the higher the posts, the smaller the shade pattern; use the lowest height consistent with obstacle clearance possible.

Installation & freight are not included in the prices listed.

new footings

Units can be surface mounted on new footings poured to specifications.
 Footing requirements vary according to structure size. Please call for specifications.
Incorrect installation voids all warranties.
 J-bolts are not supplied by Apollo Sunguard Systems, Inc.

existing

Units can be surface mounted on a 4" (minimum) existing concrete slab.
 Slab requirements vary according to structure size. Please call for specifications.
 (Each post must be 1' from any edge. For example, a 25'x25' pad takes a 23'x23' unit.)
Incorrect installation voids all warranties.
 Anchor bolts are not supplied by Apollo Sunguard Systems, Inc.
